Tahlia Wu

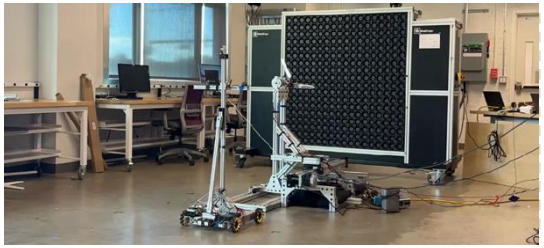

Mechanical Engineering & Robotics @ UPenn 2028

Skilled in both software and hardware, I specialize in electromechanical system integration and automating data analysis.

tahlia@engineering.upenn.edu

Engineering Projects

Robotics

FlowBot

Precision Machining

Kirby Stirling Engine

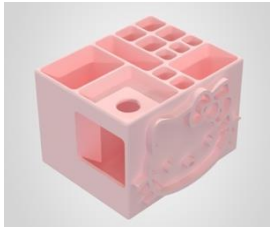

Product Design

Floating Shelf

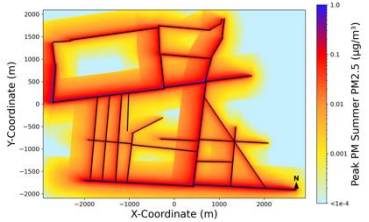

Product Design

Light Box Shelf

Product Design

Makeup Organizer

Data Analysis

Air Pollution Model

Mechatronics

FlowBot

Embedded Systems

PID Control | FEA Analysis | DAQ

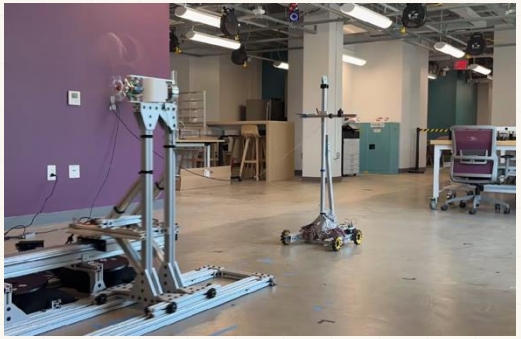

Python | Electromechanical Integration

End-to-end engineered a mechatronic system with minimal oversight

- Designed a **vertical linear actuator with 80/20 from scratch** for <$200
- Designed in CAD and **3D-printed** hardware integration components
- **PID control loop** with OptiTrack motion capture achieveing 6mm accuracy
- Diagnosed and debugged a **data buffer overflow error** in software

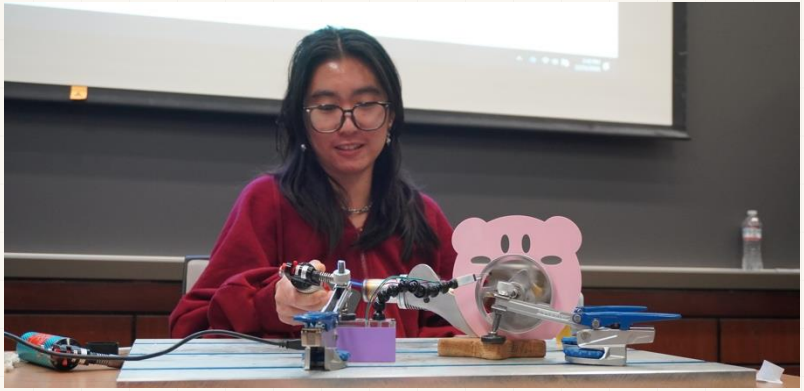

tahlia@engineering.upenn.edu

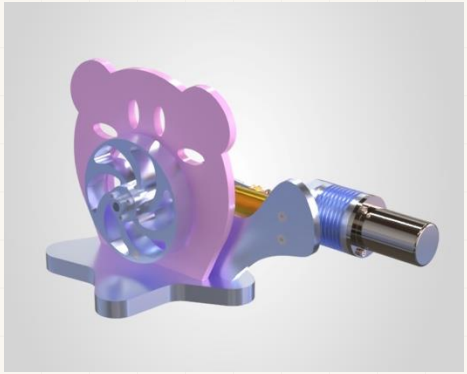

Machining

Kirby Stirling Engine

CNC / Mastercam | Lathe | 2.5-Axis Mill | SolidWorks / CAD | GD&T | Tolerance Stack Up

Precision-machined 17 parts from stock to build a fully functional Stirling engine, showcasing **end-to-end product development** from CAD/CAM integration (SolidWorks, Mastercam).

Materials machined:

- C360 Brass
- 1020 Carbon Steel
- 6061 Aluminum
- 303 Stainless Steel
- Wood
- Acrylic

Product Design

Floating Shelf

Laser Cutting | SolidWorks / CAD | DFM/DFA | Rapid Prototyping

Driven by the need to optimize spatial efficiency, I engineered a minimalist display solution featuring a modular architecture for seamless **Design for Disassembly (DfD).**

The system was modeled in SolidWorks and **rapidly prototyped** with **laser-cut** 0.25" clear acrylic to maintain an unobtrusive visual footprint.

tahlia@engineering.upenn.edu

Product Design

Light Box Shelf

Laser Cutting | SolidWorks / CAD | Joint Design | DFM/DFA | Rapid Prototyping

Merging form and function, I engineered a figurine shelf that seamlessly **integrates an aesthetic display with practical storage**.

The concept was parametrically modeled in **SolidWorks** and rapidly prototyped using laser-cut ¼” MDF.

Product Design

Hello Kitty Makeup Organizer

3D Printing | SolidWorks / CAD | DFM/DFA | Rapid Prototyping

After noticing my makeup frequently falling off due to my limited counter space, I measured my actual makeup collection and used **SolidWorks to design** a vertical organizer perfectly sized for my needs.

I 3D printed this using ABS with dissolvable supports and finished with a personalized spray-painted color.

tahlia@engineering.upenn.edu

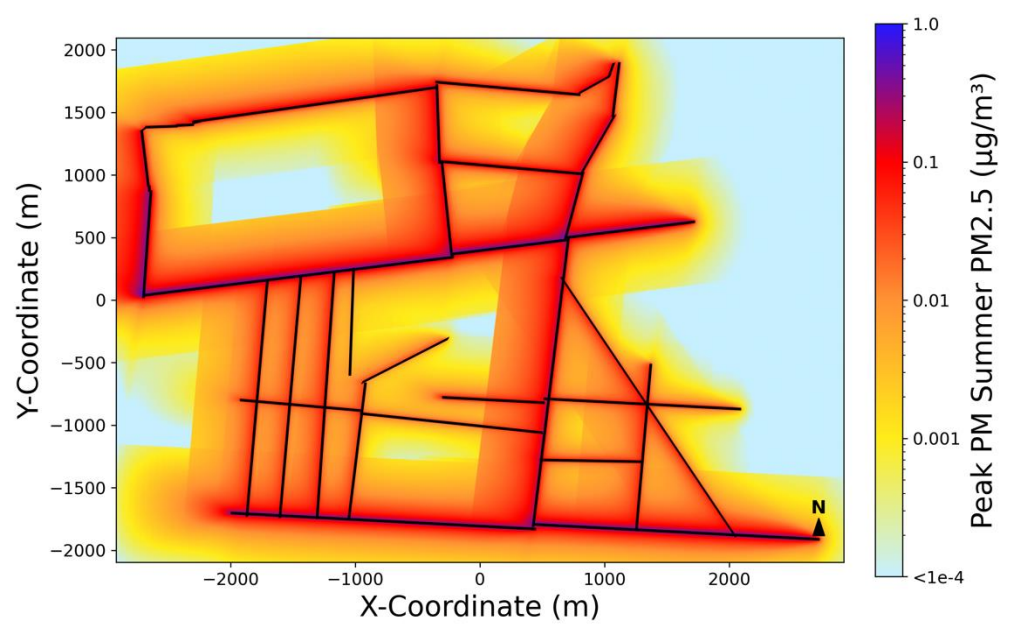

Data Analysis

Air Pollution Model

R | EPA MOVES/R-LINE

Data Analysis | Virtual Simulation

To overcome **computational bottlenecks** in high-resolution vehicular emissions modeling, I engineered a scalable **superposition algorithm and unit-road dictionary,** successfully validating this accelerated pipeline on a 36-road network in Ohio.
